

CARBON ASSESSOR

**NEW CRC
SOFTWARE**

This exciting new user friendly carbon emission assessment software - developed in conjunction with renowned global construction consultants Davis Langdon - offers a straightforward way of gathering and assessing energy data across your building stock.

Carbon Assessor is designed to empower owners and managers of multi-building portfolios with a simple way of gathering and analysing energy data, and complying with the new CRC Energy Efficiency Scheme.

KEY FEATURES INCLUDE:

- Team workflow - manage and have multiple contributors with different levels of access across your portfolio or for specific buildings
- Easy, intuitive data entry on a common web accessible platform
- Ability to tailor set-up and results to suit your organisation using custom filters
- Provides a simple way to gather and analyse building portfolio energy/carbon data
- Specific built-in CRC elements and automated calculations to support compliance
- Calculates overall building and portfolio energy use, carbon footprint and fuel costs
- Provides indicative comparison of each buildings performance against the portfolio
- Highlights areas of inefficient energy use and under-performing buildings to enable reduction activity to be targeted where it is most effective

Additional features are planned for Summer 2010 and will include new carbon planning tools & the ability to share data with the free IES **<DEC Assessor>** for creating Display Energy Certificates (DECs).

Davis Langdon Carbon Assessor

Carbon Assessor enables you to record the carbon emissions of all your buildings and plan for year on year reductions.

With easy input and online web access to multiple parties, the tool will save hours of work in assembling data and defining ongoing reduction strategies; helping target activity where it is most effective.

Features Include:

- ◆ Team Workflow – Portfolio Manager and Building Manager access
- ◆ Easy data entry on a common web accessible platform
- ◆ Calculate energy use, carbon footprint and fuel costs
- ◆ Automated CRC calculations to support compliance*
- ◆ Tailor results to suit your organisation using custom data filters
- ◆ Gain insight needed to determine your reduction strategy
- ◆ Build up evidence pack required for the CRC Energy Reduction Scheme*
- ◆ Supporting consulting services available from Davis Langdon and IES

Register your organisation for your **FREE 30 day trial** and start planning your carbon reductions now!

Select your country

* Available to UK users only

Coming In Summer 2010

- ◆ New carbon planning tools
- ◆ More reporting and analysis functionality.
- ◆ Enhancements to CRC capabilities, including the ability to automatically export data to the Carbon Trust Standard 'carbon footprint spreadsheet'
- ◆ Ability to share data with the Free IES DEC Assessor for Display Energy Certificate generation

Support & Training

A flexible range of training sessions on the Carbon Assessor application are available [Learn more »](#)

About Davis Langdon

Renowned worldwide for innovative thinking and research, Davis Langdon is a Global construction consultancy focussed on delivering the best outcomes for clients.

CARBON ASSESSOR

**NEW CRC
SOFTWARE**

COSTS

Carbon Assessor is available for a modest annual licence fee based on a sliding scale linked to number of buildings and users required - starting at only £750/annum for 20 buildings and 2 users.

Contact sales@checkmycarbon.com to request a free demonstration or quotation.

SUPPORT

Find answers to your questions in the integrated 'Support' menu. FREE after sales support is offered to get your IT system set up. Additional help is available by purchasing technical support credits - a convenient way to gain direct access to our personal, professional support network connecting you with our team of friendly support staff.

TRAINING

We offer a low-cost live e-training session showing you how to use the Carbon Assessor application to gather and analyse your building portfolio energy/carbon data. Each session costs £100 plus VAT per person.

Contact training@checkmycarbon.com for further information.

DEVELOPING YOUR CARBON EMISSIONS REDUCTION STRATEGY

The valuable information provided by Carbon Assessor will give you a unique insight and assist you in determining your mitigation strategy to reduce carbon emissions in a planned cost effective way - crucial to reducing the associated energy and Carbon Allowances costs and avoiding penalties by improving your position in the CRC league table. Determining a mitigation strategy to reduce carbon emissions over time is crucial to reducing the associated costs of the CRC Energy Efficiency Scheme.

Use Carbon Assessor to start defining an ongoing emissions reduction strategy and target activity where it will be most effective.

SUPPORTING CONSULTANCY SERVICES

Associated IES and Davis Langdon consulting services are available to help you minimise ongoing costs and keep a spend-to-save philosophy at the heart of the agenda.

- › **Building Operational Audits** - reviewing how a building is used and the disciplines of its management

- › **Building Energy Audits** - an engineering based check of the systems in place, how efficiently they operate and what scope there may be for further enhancement
- › **Tax Relief Reviews** - any expenditure on existing assets will be highly tax friendly and early identification of the potential savings can help enhance the viability of possible improvements
- › **Utilisation Reviews** - experts can consider the way buildings are used and contribute to better space planning
- › **Dynamic Simulation Modelling** - virtual modelling can be used to identify energy/carbon efficiency opportunities and quantify potential reductions, which can then be costed and tax-relief planned to balance against reduced energy costs and fewer CRC Carbon Allowances

Contact consulting@checkmycarbon.com for further information or a free quotation.
